Python Project: To-Do List CLI App

Problem Statement:

People often struggle to manage their daily tasks effectively. A simple command-line to-do list can help users keep track of their tasks, mark them as done, and remove them once completed.

Create a basic Python program that:

- Allows users to add tasks to a list.

- Displays the list of current tasks.

- Allows users to mark tasks as completed.

- Allows users to delete tasks.

Objectives:

- Practice core Python concepts:

  - Lists

  - Loops (while, for)

  - Conditional statements

  - Functions

  - User input/output

- Understand basic program structure and flow control.

- Work on simple text-based menus.
